Appropriate breast imaging is important for the investigation of breast changes. This 'case-based' seminar will provide GPs with a comprehensive overview of the different breast imaging tests.

Topics include:
- Breast cancer - Who is at high risk? What are the common presentations?
- What is the significance of dense breasts?
- Unproven breast imaging
- What breast imaging modalities are available in 2017?
- Breast MRI – What GPs need to know
- The Triple Test in the investigation of a new breast symptom
- Inflammatory breast disease
- Nipple discharge

To register: Registrations are essential.

This free workshop is organised in collaboration with Royal Perth Hospital, BreastScreen WA and Cancer Council WA.
Learning outcomes
At the end of this session, participants should be able to:

- Provide information to women and their families about their risk of breast cancer
- Inform and counsel women about the significance of dense breasts
- Identify the most appropriate breast imaging modalities for women with symptoms
- Describe the common presentations of benign breast disease
- Summarise the pathway for screening asymptomatic women with BreastScreen WA
- Assess and investigate a patient who presents with a new breast symptom

*Please note these learning outcomes are subject to change*
